Question 4: Annual Sales and Percentage Increase

AIM:

To calculate total annual sales and percentage increase from the first quarter to the fourth quarter using NumPy.

ALGORITHM:

1. Import NumPy.
2. Store quarterly sales in an array.
3. Calculate total sales using np.sum().
4. Calculate percentage increase from Q1 to Q4.
5. Display the results.

CODE:

```
import numpy as np

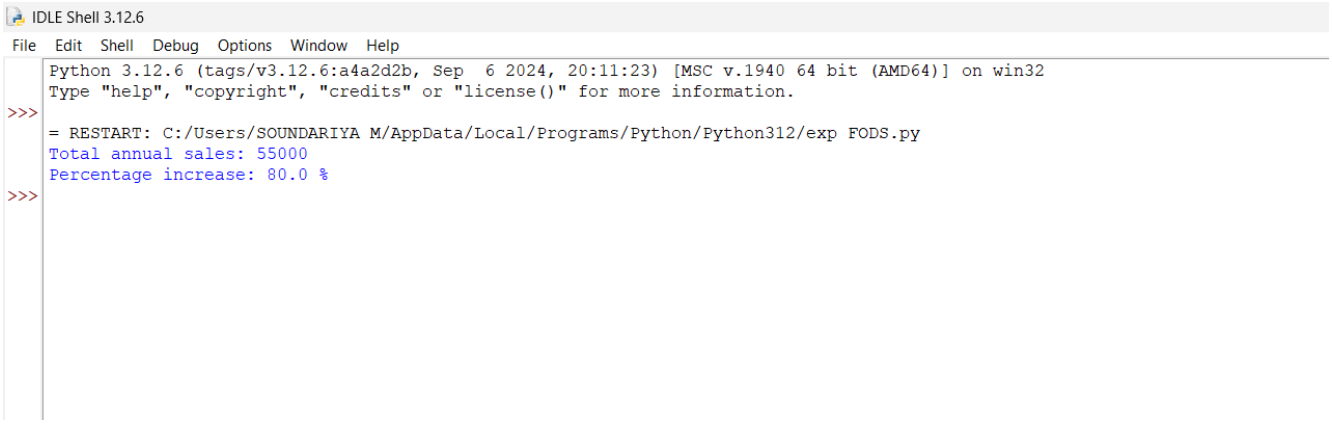

sales_data = np.array([10000, 12000, 15000, 18000])
total = np.sum(sales_data)
increase = ((sales_data[3] - sales_data[0]) / sales_data[0]) * 100
```

```
print("Total annual sales:", total)
print("Percentage increase:", increase, "%")
```

INPUT:

sales_data = [10000, 12000, 15000, 18000]

OUTPUT:

RESULT:

Total annual sales are 55,000, and the percentage increase from Q1 to Q4 is 80%.
